

VEHSS Diagnosis Code Categories and Crosswalk

2-Level Organization of Conditions

Vision and eye health diagnosis codes are grouped into a 2-level categorization scheme. The categorization system described in this spreadsheet includes 17 major categories corresponding to major eye and vision conditions. These major categories are further subdivided into 76 subgroups and 3 modifier subgroups. Each major category has 1-10 subcategories. The categories and subgroups are inclusive of all identified vision and eye health related diagnosis codes. Separate crosswalks are presented for International Classification of Disease, Ninth Revision (ICD-9) and Internal Classification of Disease, Tenth Revision (ICD-10) coding systems.

3 Modifier Categories

All diagnosis codes are assigned to only one subcategory, with the exception of 3 modifier categories:

Subcategory 3.3x_GA: contains ICD-10 codes specific to geographic atrophy (GA) that can be used to modify Subcategory 3.3

Subcategory 3.4x_CNV contains ICD-10 codes specific to choroidal neovascularization (CNV) that can be used to modify Subcategory 3.4

Subcategory 5.x_Severe Glaucoma: Contains severity scales that can be used to modify Category 5.

These modifier subcategories are denoted by an x, and the use of text in the category name. ICD-10 codes for GA (advanced atrophic) and CNV (active choroidal neovascularization) were released in October 2016, and these codes are duplicated from subcategories '3.3 Dry-form AMD' and '3.4 Wet-form AMD'. Subcategory '5.x_Severe Glaucoma' is likewise a modifier to denote severity of glaucoma, but not type. In ICD-9 codes, glaucoma severity is listed as a second code, and does not indicate type. Thus, ICD-9 code '365.7 Severe Glaucoma' is not included in any other stage, but any patient with this diagnosis should be represented in one or more specific glaucoma types as specified in the other 'Category 5 Glaucoma' subgroups. However, ICD-10 codes specify type of glaucoma and severity scale. In this case, ICD-10 codes indicating severe glaucoma are duplicated from the 'Category 5 Glaucoma' subgroups and the '5.x_Severe Glaucoma' subgroup.

Workbook Contents

'Categories and subgroups list' is a list of the categories and subcategories

'ICD9 Categories' is the crosswalk linking ICD-9 codes to categories and subcategories, used for analysis of ICD9-based data

'ICD10 Categories' is the crosswalk linking ICD-10 codes to categories and subcategories, used for analysis of ICD10-based data

Change Notes

Version 3: Moved tear film insufficiency and dry eye syndrome from 14.3 to 14.5
